

Forestry Sampling (Eucalyptus, Pines)

Seedlings

Timing: As required in regular intervals

Sample volume: 20 whole seedlings

Sampling: Collect 20 representative whole seedlings removing the roots and retaining the shoot for analysis

Trees

Timing: Sample in spring, mid winter then again in autumn

Sample volume: 50 growing tips

Sampling: Collect 10 cm of new growth from 50 representative trees at mid crown height. Use shoulder height on large trees where mid crown cannot be reached. Use the same trees every time. Retain the whole tip for analysis

Growth Stage numbering system is in accordance to the extended BBCH, a uniform coding of phenologically similar growth stages for all plant species
